PROFESSIONAL SUMMARY

Final-year Bachelor of Computer Science student with practical experience in full-stack development, software testing, and technical documentation. Experienced in developing web applications using Laravel, React, Java, and Python, with hands-on experience in QA testing, system maintenance, and database management. Seeking full-time opportunities in software development, QA, or software testing where strong technical and analytical skills can contribute to reliable software solutions.

EDUCATION

Bachelor of Computer Science (Hons) Universiti Teknologi MARA (UiTM), Shah Alam CGPA: 3.56 Dean's List Awards	Mar 2024 – Present
Diploma in Computer Science Universiti Teknologi MARA (UiTM), Segamat CGPA: 3.3	Oct 2021 – Feb 2024

PROFESSIONAL EXPERIENCE

Software Developer Intern Trackerhero Sdn Bhd	March 2026 – Present
Full-Stack SaaS Development: Independently developed a Customer Relationship Management (CRM) system using Laravel, React, and Tailwind CSS, featuring an omnichannel unified inbox, dynamic Kanban sales pipelines, lead management, and automated lead routing. System Architecture & Integration: Developed backend services, database workflows, API integrations, authentication, real-time communication, and business logic supporting multi-tenant CRM operations. System Maintenance & Optimization: Maintained and enhanced a live application by resolving service-layer bugs, improving data calculations, and refining database models and system workflows without disrupting active business operations. Quality Assurance (QA) & Technical Documentation: Conducted structured testing of core workflows in staging environments and prepared user manuals and technical documentation to support client onboarding and system usage.	
System Analyst Intern 2en Apps Sdn Bhd	Sep 2023 – Feb 2024
Software Documentation: Prepared BRS, SRS, and SDD documents using Microsoft Word for company projects. System Analysis & Modelling: Created system flowcharts and process diagrams using Microsoft Visio to document requirements and workflows. Quality Assurance & Collaboration: Contributed to QA documentation and testing activities while collaborating with development teams to ensure features aligned with client requirements.	

ACADEMIC & TECHNICAL PROJECTS

MindaConnect – AI Chatbot for Early Depression Support (Machine Learning Project)

- Developed an AI-powered chatbot using Python and Flask to provide conversational support for users experiencing early signs of depression.
- Fine-tuned a pre-trained LLaMA language model using a custom dataset to improve its ability to understand and respond to user inputs within the intended support context.
- Applied Natural Language Processing (NLP) techniques to process user input and integrated the fine-tuned model into the chatbot backend for real-time conversational interactions.
- Testing & Verification: Conducted functional testing of chatbot conversations and evaluated model responses to ensure reliable and contextually relevant interactions.

UniTaxi – E-Hailing System for UiTM Students

- Designed and developed a Java EE-based e-hailing system to facilitate taxi bookings and transportation management within the UiTM campus.
- Implemented WebSocket-based real-time communication to enable live updates between students and drivers during the booking process.
- Integrated an Oracle Database to manage user, booking, and route-related data with structured database operations.
- Testing & Verification: Conducted functional testing of booking workflows, real-time communication, database operations, and route management to ensure system reliability and data consistency.

KEY ACHIEVEMENTS

- Independently developed a full-stack SaaS CRM platform as part of professional internship experience.
- Maintained a live software application while resolving system issues and improving existing workflows and data processes.
- Achieved a 3.56 CGPA in the Bachelor of Computer Science (Hons) program and received Dean's List recognition.

CORE COMPETENCIES & SKILLS

- **Programming Languages:** PHP, Python, JavaScript, TypeScript, Java, C++, SQL, HTML/CSS
- **Frameworks & Libraries:** Laravel, React, Inertia.js, FastAPI, Flask, Java EE, Tailwind CSS, Radix UI / shadcn/ui
- **Development Tools & Technologies:** GitHub, GitLab, VS Code, Claude, REST APIs, WebSockets, Redis, Laravel Horizon, Vite
- **AI & Machine Learning:** LLMs, Rasa, Prompt Engineering, Model Fine-Tuning, NLP, SVM, Data Preprocessing.
- **Quality Assurance (QA):** User Acceptance Testing (UAT), Unit Testing (UT), Manual Testing

ADDITIONAL INFORMATION

Languages: English (Intermediate), Bahasa Malaysia (Native)

Interests: Full-stack development, software engineering, machine learning and software quality assurance
